

MESSAGE COMMUNICATION SYSTEM AND METHOD

**ABSTRACT OF DISCLOSED
EMBODIMENTS OF THE INVENTION**

The disclosed embodiments of the invention relate to a system and method of message communication for a confined area of a facility. A personal identification information of one member of a group is entered into at least one of a set of stations distributed throughout the confined area. A message is displayed in response to the receipt of the personal identification information. A request to find the location of the members of the group can be entered into at least one of the group of stations.
